Construction of Two New Dormitory Units Will Be Started Soon

Ordinance Post will be Moved

Senior redemption drive opens today

Hanks High Hurdles

Technology Wins

Beaver Baseball

Sports Summary Over the Weekend

Track

Varsity: M. I. T. 7/5, Holy Cross 3/7
Freshman: M. I. T. 13, Holy Cross 0

Crew

156-lb. varsity defeated by Vassar and William and Mary. Junior varsity defeated by Union

Baseball

Varsity: M. I. T. 4, Trinity 6,

Freshman: M. I. T. 13, R. U. 7,

Sophomore: M. I. T. 7, Amherst 2,

Junior: M. I. T. 4, West Point 3,

Professor Hardy will visit West

Leaves This Week to Teach Course at University of California

Professor Arthur C. Hardy '18 of the Department of Physics will leave for the University of California this week to deliver a course of lectures and demonstrations on "Thermal Physics" in that university. He will make its appearance in the halls of the university in a couple of weeks.

At this time, Hardy will be able to offer a wide variety of courses on the subject of his specialty, ranging from a simple course in elementary physics to advanced courses in quantum mechanics.

The importance of the motion picture to the instructor of the present day when teaching a course of this nature cannot be overestimated. In face to face meetings with students, the instructor is able to provide a better understanding of the subject matter. Students can also benefit from the visual aids provided by the instructor, such as diagrams and models.

Tells Chemists Medical Problems

Herty Talks on "Chemistry and Health" Before A. C. S.

"Every human body is a chemical machine," was the keynote of a lecture delivered by Dr. James W. Herty, a chemist with the University of California, in front of a large audience at the Institute Friday before the final examination period.

Dr. Herty said that the body is a chemical machine that makes use of chemical processes in order to function properly. In particular, he said, the body needs a constant supply of food, water, and oxygen in order to function properly.
