Edward P. Warner
Will Address Air Meeting Tonight

Aviation Conference is Being Held in Boston During Aero Show

Edward P. Warner, chief aerodynamicist for the new Curtiss-Wright aircraft, will address the Aero Club here today. The meeting, which begins at 6 o'clock tonight in the new auditorium of the Museum of Science, is to concern itself largely with the problems of airplane operation. The address will be on the subject of “The comparative acoustics of different types of aircraft.”

cardboard boxes are not the only source of household waste. The amount of build-up around the country has increased so much in recent years that it now constitutes a serious problem. The reason for this is that people are becoming more aware of the need to conserve resources and reduce waste.

dustry has grown tremendously in recent years due to increased demand. It is estimated that the industry will continue to grow at a steady rate in the coming years.

calories are burned during various activities. For example, dancing the fox trot burns 4.78 calories, while walking rapidly burns 3.80 calories. These values are based on average metabolic rates and can vary depending on individual factors.

to be used in the treatment of diseases in accordance with instructions received by code has been prepared and is awaiting approval by the Medical Society.

College drinking has increased in the last few years. The problem of students consuming excessive amounts of alcohol is a concern for institutions of higher learning, and efforts are being made to address this issue.

Fresno, the oldest building on the campus, is now used as an office building. The old chapel on the third floor of the university was once used as an office, but it is now occupied by the auditorium.

Edward P. Warner, a professor of aeronautical engineering at the Institute of Technology, received the degree of Bachelor of Arts in 1917 and the degree of Master of Science in 1918.
