All Four New Technology Buildings Are Rapidly Approaching Final Form

Considerable Doubt Whether Langan's Tunnel Will Be Used

The four buildings now under construction are rapidly taking form. One of them, Beals Memorial, is expected to be completed at the end of the year. This building, which is expected to be the largest and most modern in the country, will be used for the purpose of housing the Institute's library, a museum, and a library. The second floor will house a large המי-

ing laboratory, a drafting room in which the student will be able to work on their own projects, and a study room. The third floor will be available for the use of the student body, and the fourth floor will house the dormitory. The structural steel work of the second and third floors is now complete, and the first floor concrete has been poured. The fourth floor will be completed in the near future. The total cost of the building will be approximately $1,500,000.
