Landmark of War Fame Gradually Disappearing

The Landmark of War Fame, the steel pier, 210 feet long, 20 feet wide, and 11 feet thick, that stands on a large concrete platform out in Casco Bay and appears gradually beneath the然而, was sold to a wrecker of the Great Western Steamship Company, and is now a part of the jetty at Windward, a group of islands opposite the harbor.

Within the week, the historian's file that witnessed the ravages of Technology Club annual on the pier of the American Historical Association will disappear from the pier. It is said to be the largest private collection of American History in the world, and to have been assembled by the late Edward H. Nourse, 39, of the Dupont family.

Voting tomorrow at the Main Lobby will be the first time that any of the Corporation's members have voted on the pier. It is hoped that by this method, the Corporation will be able to acquire the necessary space for its headquarters.

This is the beginning of the 15th century at the American Historical Association, which was founded by the late Mr. Nourse in 1862. There are now over 2,000 members of the Association, and they are expected to vote tomorrow.

Remembrances that the pier is the place where the Corporation was founded, and where its members have met for more than a century, will be made by the Corporation's officers.

Radio Society Has New Power Panel

The Radio Society has been very active recently, and has been able to make many changes in its lab equipment. A new power panel has been constructed that will enable the society to do much more work.

In addition to the power panel, a new 500-cycle plate supply has been added to the lab. This supply will enable the society to do much more work, and to have more flexibility in its operations.

This is the second important lecture given by the Radio Society, which has been recently formed. The first lecture was given by the late Mr. H. Nourse, who was the society's president.

The lecture was given at the first meeting of the society, which was held in the lab at the American Historical Association.
