HOOVER the engineer, Hoover the humanitarian, Hoover, can-
didate for the highest office in the land, will visit Technology
at noon today. Almost without the semblance of a political
potential of not far in the future, but that alone would be
comparatively little attraction to the average Institute under-
graduate.

Some of us assuredly will be there to cheer our favorite run-
ner, and perhaps some of us, unadulterated by office, will see
a famous man; but the largest number will be in front of the
Great Court at 12:20 today to pay homage to one of
America's greatest engineers and one of the great heads of
the various groups, requesting that they write up events
which are of interest, social affairs, personal items, and so on. We urge the
heads of the various groups to send their summaries so that we may get the feed-
back to the papers. The B.B.U. will notify使其 the next day in the Institute news
of every activity to which their students have contributed.

In closing of this issue:

WE WELCOME AN ENGINEER
