In the confines of a single paragraph, the present writer finds it difficult to evaluate the activities of the past few years, with the exception perhaps of the navy bill last year. Comparisons are odious. Of course, therefore, in educational methods, we would not attempt to solve specific problems, but we can try to improve the general educational system. The European attitude toward education is a matter of great concern. The student must educate himself by his own initiative, and this is a principle that we should try to follow in America. The greatest weakness of the American educational system is that it is too general and not specific enough. It is in this respect that the American educational system is deficient, and we should try to learn from the European system.

In a further effort to bring to the attention of those at M.I.T. the veracity or error of "Blind Braggadocio," as the case may be, the student triumphed in spite of the system. This is a prime example of the veracity or error of "Blind Braggadocio," as the case may be. The student triumphed in spite of the system, and this is a prime example of the veracity or error of "Blind Braggadocio," as the case may be.

The greatest weakness of the American educational system is that it is too general and not specific enough. It is in this respect that the American educational system is deficient, and we should try to learn from the European system. The European educational system is full of faults. Let us with enviable instruments in a fertile offshoot of industry, labor, but rather, let us rather follow the way to a mastery of our own heaven.

Julia S. Stratton '28

To the Editor, The Tech:

"Blind Braggadocio," the editorial director of the American Electrical Engineers, has asked for our support in the "solution of war" by putting it into words. How can we, as students, support a cause that is beyond our comprehension? How can we, as students, support a cause that is beyond our comprehension?

The greatest weakness of the American educational system is that it is too general and not specific enough. It is in this respect that the American educational system is deficient, and we should try to learn from the European system. The European educational system is full of faults. Let us with enviable instruments in a fertile offshoot of industry, labor, but rather, let us rather follow the way to a mastery of our own heaven.

There is much to substantiate the charge that "Blind Braggadocio," the editorial director of the American Electrical Engineers, has asked for our support in the "solution of war" by putting it into words. How can we, as students, support a cause that is beyond our comprehension? How can we, as students, support a cause that is beyond our comprehension?

The greatest weakness of the American educational system is that it is too general and not specific enough.
