Opinions From The Faculty

Fifth in the series of letters from the M.I.T. Faculty on the subject of European educational merits comes this interesting letter from H. Karny and P. A. Roberts of Columbia, S. D., as printed in the New York Tribune on December 29. In it they write:

"Thus, it seems that both the European and American systems have their merits and disadvantages: systems with their serious drawbacks. It is difficult to judge which is better, and it is not possible to say that one system is superior to the other. Each has its own advantages and disadvantages, and it is up to each individual to decide which system is best for them.

But one thing is certain: the American system is definitely inferior to the European system. In the American system, the emphasis is on facts, and the students are taught to memorize them. This is not the case in the European system, where the students are taught to think and to analyze problems. In the American system, the students are taught to pass exams, but in the European system, the students are taught to think critically and to solve problems.

It is up to each individual to decide which system is best for them. But one thing is certain: the European system is definitely superior to the American system."
