The "Tech on Boylston Street", Where Embryo Architects Indulge Their Artistic Tastes

ROGERS BUILDING, BOSTON

Sleepless nights have the fresh- man architects spent the last two weeks, toiling away in this lab of creativity, for their final designs are due in the next few days. How should they ever have the time to sleep if they choose to stay awake in order to complete these projects, which are due? They have chosen instead a college ink wash but still present these column through the medium wall hanging, that is, the latest one, which is on view in the lobby of the College. There are two large murals and a smaller one, the former being a sketch of the building, the latter a copy of it.

The "Tech on Boylston Street" is a large building, with several stories, and is situated on Boylston Street between the Harvard and the Massachusetts Avenue. It is a handsome building, with many large windows, and is a very pleasant place to work in, both from the outside and the inside.

The building is not only a place of business for the architects, but also a place of education. The students have the opportunity to learn about the different aspects of architecture, such as design, construction, and material selection. They also have the chance to work with others on projects, which helps them to develop teamwork skills.

In conclusion, the "Tech on Boylston Street" is an excellent place for students to learn and work. It provides a great environment for learning and collaboration and is an important part of the architecture program.
