Statistics Show Engineer's Salary Equals That of Other Professionals

Society for the Promotion of Engineering Education

Compares Data

Federal Income Tax returns for 1930 and other authoritative sources have been used by the Society for the Promotion of Engineering Education in a recent study of the earnings of engineers. The comparison shows that a low grade engineer is earning less than his professional degree would warrant. The outlook for the future of the engineering profession is not improved.

The comparison is based on the assumption that the income of engineers is represented by Federal Income Tax returns for 1930. The income of engineers is not charged with pretensions, as is frequently represented by the public.

The Engineer is a valuable asset to the nation and should receive a salary commensurate with the work he does. If the Engineer is given a chance to compete, he will show himself worthy of the opportunity.

CREDIT FOR CRAMMING

FACULTY opinion has long biased the student who delays doing his work until the last few days of the semester. It is justly so, for it is next to impossible for him to absorb an average amount of knowledge in the short time at his disposal. Such procrastination may be due to the lack of determination of the student or to the inability of the student to assimilate what he reads. It may also be due to the fact that the student does not have the right attitude towards learning.

On the other hand, should this student turn in all his work for at least a week, the only solution is to make the material more digestible and to reduce the amount of work. The student should also have an added responsibility for the possessor. That is, if it is an engineering grade, the student should be recognized for his true worth by the faculty.
