H. M. LANE DOES TELEVISION WORK

Extreme Frequencies Present
Many Difficulties in Operation

(Continued from Page 1)

The complete transmitting and receiving apparatus has been built by Mr. Lane. The output of the transmitting apparatus is radiated in the horizontal plane and received by a small receiver similar in construction to that of Prof. E. B. Wilson, Harvard University, and the receiver has been fitted with directional receiving apparatus.

The students of the Scanning Disk of the Electrical Engineering Department have been experimenting with troubles involved in the construction of high-frequency transmitters and receivers for some time. The experiments were made in the laboratory of the senior electrical engineering students with the assistance of the students of the University of Wisconsin in the laboratories of the Engineering Department.

THE GREAT REVIVALIST THRESSES AUDIENCE

(Special from Page 1)

assure devotion toward God. The speaker attempted that if he did not pray he would go wrong in ten minutes.

Some of his many illustrations of the principle of his plan were the example of a student at a Christian college who found himself with a problem and desired that the student should not be put to bed but that the problem should be discussed by the students and that the members of the student body should be involved in the discussion and the solution of the problem. This example was said to have cleared the abominations.

There will be a meeting of the Exe- cutive Committee of the Senior Endowment Association of the University of Wisconsin, Friday, March 22, 12 o'clock, in the room 6-330.

The meetings are open to students and members of the instructing staff who are interested.

Mr. John F. Duby, of the J. F. Duby Co., manufacturers of wheel-riding instruments, has asked the students to write before the Society of Auto- matics Engineers on the present position of the Society and the adjustment on automobiles. The students will be given the Services of Mr. John F. Duby Co. for three weeks from this afternoon. He will present the various problems and the effect of the necessary circumstances and technical improvements in the automobile industry. He will give these problems to the students to consider and he will permit the students to present their own conclusions. There will be a special 12¾% discount to Tech students on all regular items sold.
