Potash Struck by Government in Test Holes Sunk in Texas and New Mexico

Geological Survey Analyzes 32 Samples from Holes in Permian Basin

Potash has been struck in each of the four government test holes sunk in west Texas and the results of the tests will be announced officially by the Department of the Interior. The Geological Survey is responsible for the analysis of the samples and it is predicted that reports of these tests will be made by the Bureau of Mines under the Potash Struck by Government in Test Holes Sunk in Texas and New Mexico. All three of the holes were drilled in the Permian Basin and the results of the tests will be reported. The Geological Survey in its present state of the art, is the only potash-mining bureau in the world.

As We See the Movies

Another side to that "dive quiz non" of the movie screen. movies, developed in "Breathe," a new Paramount release, is an interesting one. Its plausibility is offset by the fact that it is not as exciting as it might be. One cannot help but wonder how the hero of the story, played by the very capable and dashing Cary Grant, gets along without his love interest, the beautiful and charming Joan Fontaine. The story is about a young man who is faced with the decision of whether to marry his fiancée or to go on a dangerous adventure. The decision is made difficult by the fact that the fiancée is pregnant and the adventure requires a lot of courage and skill.
