Rise of Aluminum to Place of Importance Told by Prof. Robert S. Williams  

What with newspaper men probing about Alexander's tomb and persuading them over telegrams to probabilistic drawings, it is little wonder that the theories with regard to this capital may be regarded as quicksilver. However, regardless of the theories of the looters, the tomb has been justly placed in a place of honor; a place where the word "Alexander" is not merely a figment of the imagination, but a tangible reality that has been deposited by its creators onto the lips of the world. 

What is the theory of the Alexander tomb? It is a hypothesis formed by a number of people who have studied the nature of the materials used in the creation of the tomb. 

The ancient peoples of the Mediterranean used to be as full as their legends, and their tellings of the stories which they wove were as sure as the tides of the sea. Thus it was that these peoples, who have left us the ancient world, have taught us much about their art, their culture, and their science. 

The tomb of Alexander is one of the most extraordinary structures of its kind that has been discovered in the world. The tomb is made of a large number of stones, which were carved and shaped by the hands of the workers who labored long and hard to build it. 

The design of the tomb is based on a number of principles that were used by the ancient architects and engineers. The tomb was built in a manner that was both aesthetically pleasing and structurally sound. 

The materials used in the construction of the tomb were carefully selected and the workmanship was of the highest quality. The tomb was built to last for many centuries and to be a symbol of the greatness of the man who was buried within its walls. 

In conclusion, the rise of Alexander to the place of importance is a matter of great significance and it is a testimony to the power of the human spirit to overcome the limitations of time and space. The myth of Alexander is a living legend that will continue to inspire generations to come.
