The Dangers of Driving Fast Cars

Latest Fact Held No Thrills
For Malcolm Campbell
Of England

"Acing up is a bargain which for
the most part has not been
only when I have to drive a car
like this for a long time. Every
minute I have to move, even
over the sand, I feel the
pressure of the sand and the
forces that come from the
driving over the sand at 245
miles an hour. If I were to
break the world's record, I
would have the best chance to
do it, but I had to have my
interests in the event of
putting my mind on the record,
so each past hour, I could ever
break the world's record an
hour just last week down over
the sand."

No Thrills

The breaking of the world's rec-
cord, "there have been no thrills
at all for me. It is a very seri-
ous matter. If I have any say in
it, I don't think we could
break it. But so far as I am
concerned, I don't think it is a
thrilling matter."

Distinctive Rope
Marking Utilizes
Ultraviolet Light

Developed in Technology Labs
By Hurstson and Many Colla-
borators

When the Cambridge breaks and de-
fects in a piece of rope are to be
noted, whether it is a new rope
or one that has been in use,
and whether it is a rope used
for special purposes or a
rope of general use, there must
be a method of marking
it. Formerly, the task of marking
a rope has been a tedious
process, involving the use of
a dozen to 50 clips of the
same, which are made of a soft
material and are twisted into
the rope. The clips are not
visible on the rope.

A process recently devised
by the Cambridge Research
Laboratory, which utilizes
ultraviolet light, has been
invention as to whom this expense falls
among the students of that institu-
tion. But in any case, the expense
must be justified by the
benefits accruing thereto, or
the institution will be put in an
difficult position. The
benefits of this institution
are of infinite value to
those who attend it, and
they are entitled to the
best possible education.

Winter "Sports"

Drinking at the University of
Colorado is a problem which
must be faced and
solved. It is a problem that
not only affects the
students, but also the
faculty and administrators.

Drinking on the campus is
a problem that has been
recognized for many years.
But in recent years, the
problem has become
more acute. The University
of Colorado is not profiteering,
but the sale of alcoholic
beverages is a profitable
undertaking. The sale of
alcoholic beverages is a
source of revenue to the
University, and it is arguable
that the University should
profit from this activity.

KEY SOCIETY DANCE
SET FOR TOMORROW

The annual dance of the Key
Society will be held tomorrow
night. The dance will be held
in the second floor of
the University of Toronto
at 9 p.m.

All members of the Key Society
and their guests are
invited to attend.

The(Key Society is a
national organization of
women students in
American colleges.

The dance will feature a
cocktail hour, a buffet
supper, and dancing.

Tickets are available at
the Union Office.

M. H. Walker

CO-ED COLLECTOR OF
BOTTLE SPECIMENS

Young Ladies Track Y and City Dump and Beaches

If you happen to see a rather
sloppy-looking young lady
avoiding the Eyes of the
students, you can be
assured she is not the
same girl. It is probably

No thrills. But if you
have any doubts about
her, you can be sure she
does not belong to the
same circle of friends.

Sherlock's collection includes
a number of bottles of
different shapes and
sizes. She is not only an
expert in bottle
collecting, but also in
bottle鉴定. She is
always ready to
answer questions about
bottles.

At the University of
Colorado, the bottle
collection is
considered an important
activity. The students are
encouraged to bring in
bottles, and the
staff is always
available to
answer questions.

Two Outings
SUNDAY, FEB. 22

Wilton, N.H.

Race 2

Lo. No. & Stats, Boston: 6:30 A.M.;
Leverett: 9:45 A.M.

Arrive: North Station
10:20 A.M.

Round Trip

Round trip fare is $5.15.
Train will leave Leverett at
8:45 A.M. on Sunday.
