AN ADVANTAGEOUS COMBINE

The dormitory rule recently instituted which states that no student shall have on hand for personal use more than fifty dollars unless he provides a success, while made with no intention of handicapping the fraternities in their rushing season, will prove to be such for reasons apparent. The Dormitory Committee has every wish of maintaining student quarters which shall be unrivalled, and to do this it must assure itself that the facilities are used almost to capacity. The necessity necessary to provide for the improvement and upkeep of these facilities, and to insure that enough be obtained, the Committee has chosen to confine residence to as few successors when they move out. In years to come, the policy proves successful, we may expect a minimum of students living in outside boarding houses.

Intended or not, the circumstance is a factor which will make rushing the more difficult, and it seems appropriate that some steps be taken to overcome the obstacle. One remedy is offered in school supervision of fraternity activity, policy proving successful, we may expect a minimum of students living in outside boarding houses.

THE TECH

Technology Bench Mark Set on Solid Rock Far Below Lawn of Great Court

Carefully Prepared and Wall Protected in Bricks

Down 112 Feet

Sticking deep to rock 112 feet below the surface of the Great Court, Building 1, and sliding ten feet into the rock itself stands in sight two pipes filled with concrete in which a permanent mark, the Great Court's Benchmark, is level is practically constant.

This year, students poorly equipped equally well protected against any possible change in the level, to be used as an elevation reference.

In 1934 erected.

In 1927, at a cost of about $1500, the mark is used only on special occasions. When it is in use, the mark is submerged in the water and the level is measured against it with a plummet. In this manner, the level is examined removed and one reads the level in depth whose purpose is to preserve the bench mark from further damage.

Finally one comes to the mark itself. A circular, metal plate of cross purpose used to protect it from the elements.

THE OPEN FORUM

To the Editor of THE TECH:

While the subject of the popularity of Tech women has been touched upon from time to time, it might be well to mention here how great a change of favor the Institute men, as a whole, have experienced in recent times. The former, being struck with astonishment when the woman's co-ed first appeared on the scene, are now responded to by the Institute men in a manner which is fair to the incoming class and to the houses alike.

Fondly, therein, the student of Tech women's colleges.

The object of this long statement is to focus the attention of students on the diversity of their co-ed classmates and to urge them to make the most of the opportunity which is opened to them by the Institute. When students begin to realize that Tech women are interested in the same things as Tech men, and that they can contribute to the life of the Institute in every way that Tech men can, it will be an indication of the success of the Institute in its efforts to make Tech a co-ed college.

Granting verities, Hard-working Juniors, viewing Sophomores and perhaps even a few Freshmen, will be reported in the usual manner, before an accurate measurement can be taken.

Established by General Survey of the shore heights the mark was set in the solid rock of the Great Court. From year to year the mark has remained uninterrupted. The committee is compared with another on the Harbour City.

In addition to this precision bench mark, there are several others in the vicinity, these from the results of this mark that may be mentioned here. The last committee was moved.

THE FAVORITE tobacco of the Dartmouth man is...

If you want to know the Dartmouth man, watch him as he strides his pipe to his mouth and puffs away. He is a tobacco smoker. He has made Edgeworth the favorite smoking tobacco of America's leading colleges and universities.

A pipe and Edgeworth—this is the eternally true combination that has won the college man. Harvard, Cornell, Michigan, Stanford, California, Chicago, Boston, Yale, Notre Dame, and many others, through the ages, have chosen Edgeworth tobacco and Edgeworth pipes for their own.

College men everywhere respond to the appeal of pipes passed around, nine-inch Edgeworth. Begged by those who know Edgeworth, this will be their pipe of their own. That's what a tobacco should be: an important part of your life, the way you think, the way you talk.
