The Lounger

Mr. Beers Tells of Displacing

BY MODERN SCIENCE

Ancient wizardry of the divining rod kind is being displaced by modern science, says Robert Beers in his paper on "Ancient and Modern Divining Rods" which he read at the recent meeting of the American Institute of Electrical Engineers. Mr. Beers tells how the "sodales" of the olden days used a divining rod to locate the location of oil by means of magnetic attraction. In modern times, magnetic methods are used to locate oil. Mr. Beers says that there have been some successes by means of this method. The method is not foolproof, however, as there have been some failures.

Given Scent Consideration

The method of using a scented paper to locate oil is to be studied. It is known that some substances have a pleasant odor, but when mixed with oil, the mixture has a disagreeable odor. It is hoped that this method will be studied further.

Science Developing Rapidly

Science is developing rapidly, Mr. Beers says. New methods are being developed every day. It is hoped that these methods will be studied further.
