Underpass in Front of Institute
Takes Shape as Winter Approaches

Services of Diver Are Required When Excavations Are Completed

With the constant traffic of Massachusetts Avenue and Memorial Drive above, as well as several feet of water, and the roar of the metropolitan district below, it is a bit of a problem to divert a diver equipped in the regular subaquatic paraphernalia of his kind for less than a few hours several several times a day, engaged in the unromantic position of connecting sewer pipes, beneath the foundation of the new automobile underground directly in front of the Institute.

The undersized portion of this work will be completed when all of the foundation work is completed, which will be in several weeks. There will be no extensive hand digging, however, as the sewer pipes are to be contained in the new foundation, which is to be filled with concrete and compacted to a definite level. The undersized portion of this work will be completed when all of the foundation work is completed, which will be in several weeks. There will be no extensive hand digging, however, as the sewer pipes are to be contained in the new foundation, which is to be filled with concrete and compacted to a definite level. The undersized portion of this work will be completed when all of the foundation work is completed, which will be in several weeks.
