CROSBY HIGH MAN IN THIRD HANDICAP RACES OF SEASON

New Entering Several Events

A Closer Look at the Field

Phthalo Blue is the name of the new inorganic solid composed of iron (II), aluminum, and nitrogen. It is a bright blue pigment used in paints and plastics. The pigment is produced by heating a mixture of iron(II) nitrate, aluminum nitrate, and ammonia in a muffle furnace. The resulting solid is then ground and sieved to obtain the desired particle size. Phthalo Blue is particularly useful in the production of high-quality automotive finishes and industrial coatings because of its excellent color stability and durability.

Crosby High School in Third Handicap Races of Season

Several events are highlighted, including track meets and cross-country races. The importance of a strong track program is emphasized, with a focus on individual achievements and team success.
