Slowing Up of Soviet Russia's Tempo Is Evident, Says Harvard Professor

Marked Decline in Speed Is Seen Because Of Lack Of Food Supply

"A giving up of the general trend of Russian life is evident in the present situation", since the set-back in the collectivization program appears to have removed the prime cause for both development and expansion,, said Dr. Breuer, Assistant Professor of Government, and widely known inter- national student of Russian political and economic relations. "With the increase of Soviet Russia's Tempo in recent years, the tide has been turned against her. The country is now in a state of stagnation, and the general trend is downward."

"A possible explanation might be that the country is suffering from a "sickness" by history" following the Five-Year Plan, the before the depressing of the economy has led to a sensation of uneasiness, which is likely to cause a certain amount of bitterness."

"This indicates a slight excretion towards private initiative," Professor Breuer explained. "The general trend in our industrial output is more rapid than that of the country as a whole, and is likely to continue to increase." Dr. Galbraith, in contrast, said that the trend was caused by the country's need of more food supply, and the output was likely to be lower in the future."

December Yoo Sees Making

How Bow On Stands Today

december's chilly winds will be the test for Bow's standing on the stands. The bow may be tested by several factors, but the most important is its ability to withstand the cold."

Dr. G. R. Harrison Illustrates Talk with Experiments

Large Bow Serves for Atom while Ball Acts As Electron in Demonstrations

Lecture Well Attended

Using a close-wound coil of an atom, and "punches" with colored balls, Professor George R. Harrison gave vivid demonstrations of modern physical theory in his lecture on "Light and Atoms." This was the first of a series of popular science lectures, and was given yesterday at 6 o'clock before an audience which filled both rooms in the basement.

As his first experiment, Dr. Harrison passed an electric current in a coil, and showed how a blue light would appear at the end of the coil. Because the atoms of nitrogen and oxygen are too close together to produce light, he explained, the coil would produce a blue light. Then he al- lowed other gases to enter the tube, and showed how different colors would be produced as different gases were admitted.

When an extremely low pressure of gas was allowed to enter the coil, an intense blue light appeared at intervals of about one inch. Professor Harrison explained this phenomenon by the fact that the gas molecules were not able to collide with each other, and the pressure was insufficient to make the gas luminous. When the pressure was increased, however, the gas became luminous.

To prove the existence of ultra-violet rays, the lecture room was darkened and a mercury lamp was placed in the eye of a vapour tube, when, when a piece of paper was placed in the eyepiece, the paper became luminous.

Every Rehearsals

Two dates this week have been definite- ly set aside by Professor M. Fullerton, director and Faculty of each of the dramatic groups, and the dates have been taken up with the preparation of the "Abraham Lincoln" scene.

Coronation XV To Hear Austrian Talk on Business Views

Hans Mars WillSpeak at Dinner Meeting

On Thursday

Mr. Hans Mars, widely-known Viennese businessman, will be the speaker at the dinner meeting of the Austrian Club, which is to be held in the Memorial Hall of Walker Memorial.

Mr. Mars is head of the Management department of a large department store in Austria, and has been interested for some time in the labor movements there. Because of his long experience in Austria, and his familiarity with the conditions of labor, he is considered to be particularly well qualified to speak on the subject.

"The Austrian labor movement is a problem of great importance to the world," Professor Mars said. "The conditions of labor in Austria are not unlike those in the United States, and the problems are similar in many respects."

The dinner will start at 6 o'clock and the floor show will be given immediately after the dinner. The floor show will be given immediately after the dinner and will consist of a variety of entertainments, including music, dancing, and other forms of amusement. The dinner will be served at 7 o'clock and the floor show will begin at 8 o'clock.

Marched in under the management of Mr. Mars, the dinner is expected to be a great success, and the floor show will be a source of amusement and entertainment for the guests. ...
