Freshmen May Secure Ties
In Institute Halls Monday

It has been the custom for freshmen entering Tech- 
ology to wear the "Special" colors red and car- 
dinal and gray tie during their first term at the 
school. The prac- 
tice was instituted to give 
new men ample opportunity to recognize each other and 
build up the spirit of their class. While the red and 
gray tie are beloved ties, little of the usual college life 
can be found at Technology, in correspondence with 
what is ordinarily called "college life." This is perhaps 
the greatest difference between Tech and the usual 
college.

Christopher W. Samson, Princeton, will study quan-

tum electrodynamics for his undergraduate degree. 

Edward W. Samson, Princeton, will study quan-

tum electrodynamics for his undergraduate degree.
