**MASSACHUSETTS INSTITUTE OF TECHNOLOGY**

**IT'S AN ART**

A

ADMINISTERING advice par excellence is an art, and as President I. S. Banquer said in his address last year: "All the schools in the world are taught the same things, but it takes a successful scholastic career at the Institute. The elements seemed so well chosen that we present them here.

Admittedly, Technology is a hard school; there are few graduates who can say that they were able to finish without doing some great subject work, and most of them are so driven that they were able to get through. To carry out successfully the strenuous schedule of the program required that a man have something more.

To begin with, he must have a real interest in his work. Unlucky is the fellow who after a year finishes his work here, it will be almost impossible for him to complete the series of courses that have been laid out for him to make.

Then, every man must have at least the ordinary amount of brain power, but all agree that the extra-curricular activities fill a definite need. The man who comes to Technology, keeps his nose to the grindstone all the time, and then graduates without having contact with his fellow students other than in the classroom has undoubtedly received less from his education than the man who creditably passes his scholastic requirements and takes part in some one of the undergraduate activities.

The value to a college student of some activity other than the regular school work is well recognized, and almost if not all agree that the extra-curricular activities fill a definite need. The man who comes to Technology, keeps his nose to the grindstone all the time, and then graduates without having contact with his fellow students other than in the classroom has undoubtedly received less from his education than the man who creditably passes his scholastic requirements and takes part in some one of the undergraduate activities.

Finally, a man must be willing to work more or less consistently. Life at the Institute is not all work but study is what we are after here. The first year you meet problems as you go along, so when we return to the Institute in the Fall, come with a fresh interest in what you are doing, but for a man to carry on a successful school career he must keep in mind that it is not a 100 yard dash but a front sprint and perhaps even a marathon. Steady endurance is necessary.

Always keep in mind the few requirements Professor Woods has summed up the necessities for a successful career at Technology.

**WHY ACTIVITIES?**

A

S as stated in the news columns of today’s paper, THE TECH is holding a mass meeting tomorrow afternoon for all new men. The meeting is being called to help the official welcome of the administration to the incoming classes. Professors have laid the three things which are necessary: the extra-curricular activities.

The value to a college student of some activity other than the regular school work is well recognized, and almost if not all agree that the extra-curricular activities fill a definite need. The man who comes to Technology, keeps his nose to the grindstone all the time, and then graduates without having contact with his fellow students other than in the classroom has undoubtedly received less from his education than the man who creditably passes his scholastic requirements and takes part in some one of the undergraduate activities.

**Research Solves 138,000 Problems!**

More than 138,000 problems have been solved by Sears Laboratory since its establishment in 1911. Sears maintains eight separate testing units to determine the quality of Sears merchandise. The results of these tests are published in the minutest details, placed under powerful testing machine, chemical, microscopes, subjected to fire hazards, and what not.

**Shop at Sears and Save**

When you buy at Sears, you are sure of full value — sure of the finest goods — sure of your receipt — sure of your satisfaction. Sears is the master of the product from storehouse to hands of the consumer. Sears has paid the cost of research and of development, and has passed the savings on to the consumer.

Across the nation the people of America are finding Sears to be the most convenient place to shop. Sears' attention to detail, the care with which Sears products are made, the service Sears offers and the confidence it gives, are all working together to make Sears America's most popular store.
