Miss Alice T. Hunter Nominated For President of Freshman Class

Co-ed Presidential Candidate Involved in Outside Activities

For the first time in the history of the freshmen, there has been nomination for the position of class president. Miss T. Hunter, the freshman co-ed, is listed among the nominees on the freshman election ballot.

Miss Hunter came to the Institute eighteen months ago from a school in the South. “After six years in a girl’s school, I think I knew how to swell pants,” Miss Hunter said. She feels that since no other girl has ever come to Technology because they are afraid of the boys. She is in Course V, intends to major in chemistry, and wants to do research in this field after graduation.

As to class spirit, Miss Hunter does not want to know who those sickos are in the Institute of having no spirit. Tech is the greatest place ever known to man and that is why Tech is the swellest place ever.”

“Unfortunately, technology is not starting until five o’clock. Something should be done to remedy this situation.”

According to Miss Hunter some of the co-eds are interested in gym work, but the apparatus is never available to them. The co-eds are interested in gym work, but the apparatus is never available to them. The women’s basketball, for example, is not going to be started until the end of the year. Miss Hunter believes that the freshman girls should join her in this sport.

Miss Hunter is the daughter of Mr. and Mrs. M. T. Hunter, of tech. She was nominated for secretary of the Freshmen Council but declined. She was appointed as Freshman Advisor, and is a member of the Executu Committee.

The &reas is the daughter of Mr. and Mrs. M. T. Hunter, of tech. She was nominated for secretary of the Freshmen Council but declined. She was appointed as Freshman Advisor, and is a member of the Executive Committee.

FACES TO DESCRIBE EUROPEAN MACHINES

Professor Dean A. F. Descriptions of the developing work in Chemical Engineering, will describe the latest developments in chemical and Paris automobile shows at the first meeting of the Society of Automotive Engineers Wednesday in Room 3-375

Some of the most outstanding developments to be discussed are the new independently sprung wheels, a feature that will probably appear in 1934 automobiles. Plans have been made to include as speakers at all meetings, men unacquainted with the various branches in the automotive field. Movies of new car models after they are placed on the market are generally shown at meetings of the society.

James W. Venet, 1’3’5, chairman of the organization, announced that the students of the Engineering will join the Boston Branch of the national society in their regular monthly meetings.

FROSH SOCCER TEAM BEATEN BY HARVARD

The frosh soccer team lost to the Crimson Booters Friday on the Coop Field, which was wet and not conducive to good play. The score at the end of the game, 4-0. Harvard was satisfied with its victory and will probably appear on the market.

The historic sunset on Tuesday evening by placing the spotlight, this was the first time with standard broadcast reception, the Institute has installed a miniature microphone attached to a regular set. All the embyeous Carollers, Edgeworth Trustees, Wrigley Wallington, etc., will have a chance to use their own technique; that it, unless the objections advanced by the other inventors prove irrefutable.

The experimenters started Monday evening by placing the set on the window sill and converting with the passers-by below. After a few minutes a hoary bag filled with water descended from the room above, and the set was removed to a chair just inside the room. Broadcasting was not inter-
