Large Percentage of Class of 1937 Have Bought Ties

More Than Ninety-Five Per Cent of Class Rallys to Display Spirit

MORE THAN 470 SOLD

Trilingual Ceremony by Freshman Rules Committee Will Try Offenders

More than 90% of the freshmen have bought the required stones and gray ties, according to tentative figures. The total expected increases on these estimates on the number of ties sold, and this will be a very much larger one than the estimates on the number of ties sold, and this will be a very much larger one than the estimates. The reports are that 90% of the freshmen have been looking over the ties, and that they are likely to sell out before the end of the month.

RUSHING AT CAMP ELIMINATED THIS YEAR SAYS T.C.A.

G. Peter Grant, '35, Camp Director, Reports That All Freshmen Returned on Their Own

ACTION SETS PRECEDENT

Grant Credit Histories for Success Despite Necessity for Armed Guards

Frosh Co-Ed Evidence:

Class Spirit; Wear Bows

Freshman co-eds are displaying rare class spirit this term, as evidenced by the number that wear their class colors in the halls of the Institute. Being unable to wear the regulation red-and-black tie, some of the women have adopted the practice of wearing bows of various shapes of stone and concrete, with a high degree of assurance on the part of the freshmen. Furthermore, the Freshman Rules Committee has decided to enforce the law on the wearing of ties by freshmen, and has made arrangements for the enforcement of the law. In one case, a freshman was found wearing a tie that was not in accordance with the regulations, and was compelled to change it. This action has been generally accepted by the freshmen, and they have promised to continue to obey the rules in the future.

Enrolment Exceeds

Earliest Estimates

Although definite figures have not yet been released, it appears that the enrolment of freshmen this year will be considerably higher than that of any previous year. Although many of the freshmen have indicated their intention to go to college, the figures released so far indicate that the enrolment will be much higher than expected. It is believed that the increase is due to the general improvement in the economic situation, and the fact that many men have been able to secure employment and thus be able to afford to go to college.

During the past few years, the enrolment of freshmen has been rather low, and it was feared that this year's enrolment would be even lower. However, the figures released so far indicate that the enrolment will be much higher than expected. It is believed that the increase is due to the general improvement in the economic situation, and the fact that many men have been able to secure employment and thus be able to afford to go to college.

The Institute's laboratory ocean is being used by research workers, and the scientific studies of sea waves are being conducted in Building 20, situated behind the Institute. Among the recent research projects, the laboratory is being used to study the action of storm waves upon the seafloor. The data collected will be used to help in the construction of dikes, and the results of the studies are expected to be of great public concern.
