The Whistle handbills, weighing eight ounces each, were placed in the pockets of the students. A total of 300 handbills were distributed. The students were asked to hand them out to their friends, and to let them know about the meeting. The handbills contained three statements: 1) The Whistle is a independent student newspaper published every Wednesday morning. 2) The Whistle is not affiliated with any organization. 3) The Whistle is printed at the expense of its editors.

The meeting was held in the student center and was attended by over 100 people. The discussion centered around the purpose of the student organization and the role of the student in society. The students expressed their desire for a stronger student voice in the university and their commitment to working towards this goal.

The meeting was adjourned with a call to action for the students to organize and take control of their university. The students were encouraged to come together and work towards a common goal.

cleaning of the supply line and the installation of a new water main, which will be connected to the city water system. The new water main will provide a steady and reliable supply of water to the town. The old water main was usually used only during the summer months and was not as reliable. The new water main will be used year-round and will provide a more consistent supply of water. The project will also improve the overall water quality in the town.

In the end, the project will result in a noticeable improvement in the water supply for the town. The town will have a more reliable and consistent supply of water, which will benefit the residents. The project is expected to be completed within the next few months.
