**Prof. Davis to Talk To Chemical Society**

Professor Tunney L. Davis of the Massachusetts Institute of Technology will address the April meeting of the Northeastern Section of the American Chemical Society on "Early Chemistry and Alchemy". Professor Davis is a departmental editor of the Journal of Chemical Education and chairman of the Division of History of Chemistry of the American Chemical Society.

**Corps XV (Continued from Page 1)**

In explaining the prevalence of crime in America, General Needham brought out three major points. First, people are afraid to testify in certain cases for fear of underworld retribution. Secondly, police departments of different cities and political districts are so jealous of each other that they frequently do not cooperate effectively. Thirdly, there is a widespread feeling of sympathy in this country for criminals that greatly hamper the administration of justice.

**Eddy Speech**

(Continued from Page 1)

marked the past forty years of his life.

Dr. Eddy maintained that the student of today, living in a world of radical changes, must have intelligent opinions on economic and political theory as well as on the questions of war and peace, and that he must have good reasons for these opinions. While the situation in the world demands a feeling of sympathy in this country for criminals that greatly hamper the administration of justice.

**Spectroscopy Courses To Be Held in Summer**

Institute To Give Conferences

As in Past Two Years

Because of the enthusiastic response to the spectroscopy conferences held in the last two summers it has been decided to hold a third conference this year. The topics of photographic photometry, spectroscopic analysis of materials, and biological applications of spectroscopy, will be stressed, and a series of meetings at astronomical spectroscopy sponsored jointly with the Harvard Observatory will be a special feature. This conference will be a part of the special summer programs on spectroscopy and its applications that will be held at the Institute from June to September. The program will include courses in Practical Spectroscopy and Research in Spectroscopy.

**WE ASKED NEWSPAPER PEOPLE:**

"**Is this fact important to you?**"

---

**FLAVOR!**

"Camels have a great taste. And pleasing," says Norman J. Lachki, longtime smoker. "I've smoked them for many years. I smoke as much as I want to, and Camel's don't ever affect my nerves."

---

**HEALTHY NERVES!**

Pat Rothenstein, sports writer, says: "I've been smoking Camels ever since they were introduced on the market. I smoke at least two packs of Camels a day. I've never learned to use with my nerves."

---

**VALUE!**

"Camels are made from real tobacco. They're the real 'tobacco' cigarettes," says E. E. C., a student who owns some Camels. "I've had an opportunity to get 'front page pictures' for a great newspaper. "I was in the smoking room and one of the guests observed: 'They taste as much richer and more-satisfying as the finest cigarette. I have tried Camels for years and I, too, would 'walk a mile for a Camel.'"
