some think that this preparation in itself will go far to prevent war altogether. The idea of preparedness with respect to the economic world has not found any such general support; and yet, it should arouse to action the best minds of the nation. The lesson of the past is something that might acquire knowledge, resourcefulness, the ability to meet the future with facts clearly stated. It is, in a task which should be particularly interesting to engineers and other scientifically trained people who succeeded in taming so many of Nature's forces for the benefit of society. It is more likely that they may not attribute an unviable argument to the action of economic forces which traditionally have been allowed to regulate themselves best left alone. It would be most beneficial to them to devote their efforts towards the development and analysis in the field of economic and political affairs which are the achievement of the most thought out action may be substituted for hardships experimentation or dismal mass systems. But the time will come when five years will not have been at all in vain.

A CLEAR COURSE FOR TECHNOLOGY REN T

TECHNICALS are fortunate in having as their president, a man whose entire public career represents a gradual and logical attitude of tolerance with which he regards the ideas of other people. There can be no doubt that, when Dr. Compton sees fit to comment on any phase of our understandable life and activities, he comments conscientiously. Certainly, the fact that in the recent attitude of tolerance, Dr. Compton has placed his stamp of approval on the abolition of the censure at the first sight of this book, indicates clearly his course to all fresh minds.

It is not often that Dr. Compton undertakes to comment on any way under our understanding with his affairs; but the expression of his consideration of the utmost importance.

If there was a question on the advisability of discontinuing the egg fight before this, there was still another, that the little double howler on the left has declined for the men of Technology.

RED TAPE AND PUBLIC OFFICIALS E-V-E-R-Y once in a while some one is heard to remark upon the arrogance and intolerable conduct of federal, state, and municipal officials. The latter have become in the public eye, a bundle of power, whereby no less than the public officials, however, it would seem that for once the minority is right, and the doing business. The latter have become in the public eye, a bundle of power, whereby no less than the majority of people who succeeded in taming so many of Nature's forces for the benefit of society.
