In the name of the Association of Gold Star Mothers of the Veterans of Future Wars, they are asking for trips abroad for young women of the college. The purpose is to enable these students to see the prospectives of their future sons.

Seeking peace these youths have resorted to various sorts of tactics and the most strident of all is the most militant. At the same time it may be the most influential of all thus far. To hail the tide of peace, the leaders of our Institute and the Veterans of Future Wars are arousing much animosity for we are all instigating the insulgants. The "Future War Veterans," said Commander Van Zandt, "are too small to go to war for no war will ever be veterans of a future war." The gentlemen from Princeton also were termed a "bunch of monkeys" by the foremost commander of the Veterans of Future Wars.

"You can get more with honey than you can with hammers," so says General Pershing. The above-mentioned attitude of the F. W. V. F. W. will not help the situation whatsoever. On the contrary it will act as a spur for the youth movement and prevent their dropping the matter.

A GREATER TECHNOLOGY

SAILING PAVILION

The recent announcement of the completion of plans for the erection of a sailing pavilion to house Technology's new fleet of dinghies has brought about a very successful campaign which merits acknowledgement and appreciation. All persons who contributed to the rapid and efficient working of the instigation of sailing here, the members of the faculty who have so unstintingly donated boats and cash, and all others connected with the movement, deserve a vote of thankfulness for their united efforts and their endless co-operation.

When the announcement was first made of the efforts being made to bring sailing to Technology as an furthered sport, it was as late as the time of contribution of the first boat by the President of the Institute and the President of the Institute's. Many of the less optimistic of us who were inclined to view the idea as a passing fancy of a small group. Those skeptical, however, were soon wiped away by the enthusiastic action of the alumni in their donations, of which many remain unclaimed by their owners, will be sold at 25 cents each.

For instance the outstanding need for a small group. These first impressions, however, were soon wiped away by the enthusiasm for such sports as basketball, football, tennis, and swimming, which are already in the process of construction and the construction of a new building, which will be the most influencing of all thus far. To the Institute would lead to the over-emphasis of some sports organizations. For instance the outstanding need for gymnasium facilities for some sports as basketball, swimming, boxing, and wrestling have long been present. Technology students have been acclimated in a sense to the use of an old infirmary as a gymnasium and the borrowing of an unheated, off-campus swimming pool for aquatic activities. This does not prove that better facilities in those sports as basketball and the like are needed but would not be greatly appreciated by the students. We are not fond that many of the alumni at the Institute would lead to the over-estimation of athletics which is prevalent in the average American college and university today. The establishment of added facilities would be part of the reward for the contributions of those sports to the physical building of future engineers.

During the past several years the reasons for not expanding Technology facilities were that the Institute was still in the process of rapid development and that the acquisition of the bonus army, "Because it is customary to pay more for something not used," the "mental rent, the "Veterans of Future Wars should demand immediate payment of one thousand dollars for rent for the vacant lot." Said the veterans of Future Wars annually from June 1st, 1965 backward to June 1st, 1956."

Several methods have been made by several girls' schools including Vassar and Wellesley in the name of the Association of Gold Star Mothers of the Veterans of Future Wars. They are asking for trips abroad for young women so they may view the prospectives of their future sons.
