Members Need Incentive

When asked to point out what, in their opinion, is the chief difficulty in the way of the success of the musical clubs, most of the one replied that it is the failure of the management to provide a rapid succession of notable events so that members would continue to have incentive to become proficient.

Most of the members questioned felt that the $5 dues required by the clubs were not excessive, provided that members "go their money's worth."

The general reaction to the suggestion that the orchestra might be abolished seemed to indicate that sentiment that the orchestra might be abolished is in favor of maintaining it even though it may not be profitable. It was also brought out that the orchestra is necessary to aid the Glee Club in filling out a program.

Probe Started Month Ago

The probe into the affairs of the Combined Musical Clubs was ordered by the Institute Committee on February 27 and has been proceeding unusually well ever since.

A few months ago this former president of the Class of 1938, had almost his lower portion of his leg cut off in an elevator, and will probably be lost to the Varsity Crew for the rest of his college career. Two other men were lost from last year's freshman crew through their lack of scholastic interest. They are Robert Church and John Glacken. Their places are now taken by Fred Loom, '38, and Corliss Coumbes '39.

The task which must be accomplished to insure a crack Varsity Crew is to coordinate nine individuals into one smoothly running machine. The accomplishment of this will take hundreds of hours of practice, as don't be surprised to find the skids on the river even in cold raining weather, as they were yesterday.

which Advisory Council members and officers of the clubs have been present to testify regarding the activities of clubs and suggest improvements in organization.

During the period, the committee has been concerned both with giving advice for the continuance of the clubs this year as well as obtaining information, to aid in reorganizing a committee for next year. It is expected that a report will be submitted next Thursday at the Institute Committee meeting.

Final Dance Will Be Held By Faculty Club

The last Faculty Club dance of the year will be held on Saturday, April 11 between 9 and 12 p.m., in the North Hall of Walker, according to an announcement received yesterday. Drew is optional.

The dances are sponsored by the Faculty Club to afford greater opportunity for social contact among the members of the staff and their families. According to the dance committee, a congenial crowd, a smooth floor, and the music of an orchestra are all shared for the price of a pair of seats to the movies.

Mable

art, with the white color of the snow, the blue-green of the trees, and the various greens and browns of the rocks all faithfully reproduced.

Three different types of sand have been introduced in the plaster to form the varying surfaces of the peaks, while the contour of the hills and valleys has been exactly cast in miniature.

This ambitious project had a very logical beginning. Professor Mable started out with the idea of making a small reproduction of Mt. Jungfrau alone but he concluded that it would be impossible to make the model do so little justice to the original view that he decided to enlarge his scale to its present dimensions. Although much interest in natural bridges and geological importance for it shows a complete geological picture.

The model will not be completed for at least three years. Inquiries have been made as to how the professor intends to get his large project out of the small estate of his room. Professor Mable smiles and explains that the model is being made in nine parts each of which is a complete unit and is itself in this way it can be handled without difficulty.

Little Bo-peep has lost her sheep,
And doesn't know where to find them.
They're making fast, they're making fast.
Who now has a contract to bind them?

FOR DIGESTION’S SAKE—SMOKE CAMELS

CROWDED HOURS — Smokes, spices, inanimate activities—no wonder digestion often rebels at the strain of college life. Remember smoking Camelspreventingdigestion and well-being.

A young man is eating more than he should, complaining bitterly of indigestion. His doctor says: "You are not eating too much. You are smoking too many Camels."

"I HAVE TO EAT in 15 minutes—and a dinner crowd is waiting around with nervous indigestion, as narrow bushes bend from the force of the wind," says Harry Fisher, who works for Crock.

"Camel's Tobacco makes my food seethe and helps my digestion," says Bob, a Chicago lawyer.

SHE FEEDS THOUSAN DAILY. Minnie Bower, the Camel’s Tobacco girl, says: "With me, it’s always Camels! I break down a duplicate cigarette-case each day, and after perusing digestion, reposes under five of digestive fluids. Camels never juggle my nerves."

THE TERRACED MARINE DINING ROOM of the Edgewater Beach Hotel, Chicago, is now in full digestion. "Good times and good tobacco go together," says Fred, maitre d’honel of the Edgewater Beach Hotel.

"Good times and good tobacco go together," says Fred, maitre d’honel of the Edgewater Beach Hotel.

Advanced R.O.T.C. Get Typhoid Injection

In preparation for their trip to a training camp this summer, about 90 members of the R.O.T.C. are being vaccinated against typhoid at the Hoosier Infirmary by Dr. Louis W. Croce, assistant medical director. The vaccinations which are required by Army regulations, consist of three injections, spaced a week apart. Dr. Croce says that no side effects have yet contracted typhoid at the camps.

Great care must be used in matching the injections, to guard against a falsification, and also to take care that the delicate point of the "needle" is not broken off under the skin. But these are not the only difficulties the doctors meet in this work. Quite frequently one of the boys finds the scarification of the needle too much for his nervous system, and faints. "The bigger they are," said Dr. Croce, "the more likely they are to fall.
