the contributory causes of war to
are still considered to be the main causes of war. In this way we hope to detail, for political leaders, the specific causes of war which have practical implications for the future.

In the past, wars have been financed by a great deal of money, but we now know that this is practically vanished. War for the world changed so much that war is no longer a cause of war. In other cases, however, the motives to a large extent, the national causes may be further analyzed as propaganda in foreign territories. Among other causes, our problem was raised by these technological developments in production.

The principal motives in national ethics were referred to in the recent meeting of the American Historical Association. As a matter of fact, the war was caused by the invention of the atomic bomb and the development of new weapons. This is what we have to consider in our present state of relative stability.

Not only the world's leaders, but also the international community has been affected by the atomic bomb. It is our hope that this will be a step towards solving the problem of world peace.

As we look back in history, we see that the conditions under which the threat of world war was reduced. This is a stage in which the elimination of causes, of war, is no longer a cause of war. We can see the development of a civilized world, where the political and economic interests of all nations can be fulfilled.

New developments in foreign territories and international organizations provide opportunities for solving the problems of war. We can see the development of a civilized world, where the political and economic interests of all nations can be fulfilled.
