President Karl E. Compton and Charles F. Kettering, president of the General Motors Research Corporation, will visit Antioch College, at Yellow Springs, Ohio, tomorrow. Mr. Kettering is the donor of the Antioch Science House and founder of the C. F. Kettering Foundation for the study of chemical and photophysiology, one of four major research projects in progress at Antioch.

Dr. Compton will tour the Science Hall and visit with members of the Antioch research staffs and the photo-cytists staff, including Director G. L. Innis, Research Chemist Paul L. Richmond, and two other research associates, members, Dr. H. V. Kooser and V. M. Viera.

Mors (Continued from Page 1)

"We, who knew him well, feel keenly his loss as a devoted citizen of the Commonwealth, a supporter of valuable projects, and a valued friend."

Mr. Mors was president, treasurer, and director of the Simplex Wire & Cable Company, trustees of the Morse Real Estate Trust, trustee of Radcliffe College, vice-president and director of the Hub Wire Cable & Wire Company, and director of Compton's Little, Inc. He was a member of many societies, having served as president of the Boston Children’s Friends Society, and of many clubs, including the Union, Exchanges, Country, and Engineer’s, all of Boston. He was, in addition, an enthusiastic collector and had been keenly interested in the advance of sailing as an Institute activity.

The only machine of its kind

500 camshafts can be inspected every hour by an automatic machine which has been designed and built by the Ford Motor Company. It is the only one of its kind. It has a gaging accuracy of one ten-thousandth of an inch. It gages Ford camshafts at 25 points. Any dimension not within the specified limits causes electrical and mechanical devices to reject the camshaft as it leaves the machine.

There are ten inspection stations. The camshafts are placed in registered position in carriers mounted on an endless link conveyor and carried into the machine. At each station the conveyor stops momentarily. Au.
