wealth and new values, and is a long-range program. It is primarily to the latter that engineers and scientists are devoting their major attention, since both logic and past experience demonstrate its social effectiveness, and since it can only be carried through their type of knowledge and training. Quite properly and of necessity it is the first method which has been of concern to the government, since the emergency called for swift action.

"We engineers and scientists, however, are disturbed lest the palliative measures be mistaken for the cure, that attention be given to development of new industries, so urgently desired by your administration to provide employment. (3) Various groups and their wives and friends are in the creative work and permanent value in addition to supplying financial assistance. Many men work in the fundamental reductions in prices. For specific information inquire at the T. C. A. office in the basement of Walker Memorial.

The various functions of the T. C. A. last year required a budget of $20,000. Activities were entertained over the week-end. A Debate Team was established to compete in the Freshman Debate League and Chemical Engineering Debate League.

Although the N. Y. A. employs many students, it does not have many jobs to offer to students. The work they do is underwritten by outside employers. The T. C. A. Employment Service, which also administers the N. Y. A., that year obtained 380 jobs for 380 students, who earned a total of $78,000.
