NEW CONFIDENCE

IN A NEW MODE OF TRAVEL

WORD comes from Germany that con-
struction has started on a new airship,
a sister ship to the Hindenburg, and from
Washington comes word that the President
and Dr. Hugo Eckener have mapped out tenta-
tiveplans for the consolidation of commercial
and engineering resources in the establish-
ment of a regular airship service across the
Atlantic.

A series of air disasters in the past
America has proven what the airship cannot
do in rough weather. Dr. Eckener, seemingly,
having proven what airships can do in fair
weather and under a regular schedule of com-
mercial transit across the Atlantic.

Perhaps America should have taken the
hind leg long ago to seek the cooperation ofthe
one nation which seems to have been the only
successful pioneer in the design and operation
of lighter-than-air craft, and would have
been on the air with the Atlantic the first
time when every large airship in the United
States had met its doom, accompanied in each
case by a disastrous loss of life at which
the Eckener was ready to give up and conclude
that the theory of lighter than air craft was
not sound and that no good could ever come
to navigate these unwieldy masses through the
air.

But the German designers and operators
have had a degree of success from the start,
and the record of the Hindenburg is splendid.
If America wants to show what her Secretary
has told, then the rest of the world do not
wonder that she has gone to the right place.
Of course we are all wondering whether or
not this alliance will stir up trouble Internationally.

HEAR BOTH SIDES

TECHNOLOGY UNION MEETING

ALTHOUGH the Tech has taken a definite
position of whether an auditorium or a new
school should be built first in the Technology expansion program, it
was also at this meeting to give the problem
of the choice in the style which has been
adopted by the Tech Union.

At the meeting tomorrow evening will be
a chance for the whole student body, no one
excluded, to literally stand up and hash over
the whole question, to actually examine the
views which may be lying hidden in the
several minds.

Social speakers will be there, including
the President of the Institute, to give the main
speeches and form a basis for the open forum
discussion which is to follow. If you think
that the approximate 8000 of which the Insti-
tute spends generally for ice and tea annu-
ally is an excess, or that nothing is spent for
dramatics, music, or de-
ating, here is your chance to say so in so
many words.

Here is your chance to be instrumental
in the disbursement of a portion of the money
which the Institute proposed to solicit.
Even more than that, it is your duty to see
that you submit your bit during the discussion
in order that the outcome of the meeting may
not be a one-sided and uninformed indication of
the student sentiment on the matter.

SOCIAL SERVICE

UNDER THE T.C.A.

A meeting of those interested in
the whole question and advance all the per-
excluded, to literally stand up and hash over
the situation at hand? In creating a number of students well-
formed about social problems and coordinated
of their importance, the T.C.A. is performing
a real service to the community.
