FREE TENNIS WED. NOV. 7

The E. N.'s editorial last week suggesting
free use of the tennis courts for students
brought up again a question that has been an-
noying students for years.

It does not seem quite fair to charge thirty
cents an hour for the use of the tennis courts
when more favored sports are free. One result
of the present system is that the courts
are used almost as much by people only remotely
connected with the Institute as by those more
directly associated.

It would seem logical that Technology
could offer its students free tennis privileges, as
many other schools do, instead of charging as
much as public courts. If the M. I. T. A. is
interested in making a useful investigation, it
should study the question and recommend a plan
that would provide free tennis for stu-
dents.

SLEEPY-TIME IS LECTURE-TIME

Technology prides itself upon being at
the forefront of Science and Industry.
Among its many specialties is Air-Condition-
ing.

It is therefore difficult to explain just why
the Institute should fail to practice what it
preaches. Many who have slept through lec-
tures in 4-270, 6-120, and similar repositories
of stagnant air can verify that the ventilation
system of the Institute is sadly deficient.

Room 6-120 is an outstanding example, es-
specially since one would expect the newest
of Technology's buildings to be the most up-
to-date. But not only is there no artificial venti-
lization, but it is practically a physical impossi-
ble to open a window.

The only value of the present lack of ven-
tilation is that it makes possible an approxi-
mate estimate of the amount of sleep the dif-
f erent students have had the night before.

In about fifteen minutes those who have had
two-hour sleepers fall asleep almost at once.
Many of the class rooms appear occasionally
on the stage of the Boston.

The jokes have a new life about them which appeared to us. The
students are a bit tired, but feeling a
father provide quite a few belly
laughs.

Miss. Mein and Mckfle<rskirks if
they keep up the good work, will
see us again in the first balmy.

or to be considered. Factors in

In reviewing the history of the strike, the
most outstanding fact was the open disregard
of the police power of the Institute. In a sit-
down, when they refused to evacuate the plants
they occupied, this is extremely significant.

The generally accepted basis of government
is necessary for the proper working of democ-
raty - the respect for law. Respect for law is part of the
life of the Institute. If the students
accept the government, the government must take understandable steps
to enforce its edicts. The courts have always
been the essential fact in government, and
peaceable abiding by law is necessary for
peaceable enforcement of the law. Governor
Murphy, moved by very laudable humanitar-
ian motives, refused to employ troops to
enforce the order of the courts. The General
Motors Corporation, anxious to have the sup-
port of the general public in its conten-
tions, was forced to back down and to have bloodshed.
It was not overly anxious to have bloodshed,
and it was not overly anxious to have the sup-
port of the students; but the end result was that
the students were loath to see their point of view, and have
forced the order of the courts. The General
Corporation, anxious to have the sup-
port of the students, is forced to back down and
have bloodshed. It was not overly anxious to have bloodshed,
moreover, which in turn has resulted in an en-
thralling spectacle of a cadet's wife and his becom-
ing a father provide quite a few belly
laughs.
