Tech Organizes Powerful Grid Team

Construction Now Beginning On The J.L. Lewis Stadium

Incoming Freshmen Urged To Give Full Support To New Sport During Initial Season

Harvard First On Schedule

Breaking a precedent which has existed Technology was founded, the Institu- tion Committee in a secret meeting last October, recommended to the Faculty the construction of a new stadium, and work has already begun on the structure which will be Massa- chusetts Avenue just across from the College. Other gifts by George Eastman, Matthew Ryan and the DePoe family will entirely provide Tech with one of the most modern football plants in the country. Staff of research experts have already laid the groundwork in the Bio- Physics Building. The most complete history of exercising and training machines ever gathered on one field. A most promising football season, that with the help of Prof. Erwidn S. Schell, has projected a system of nation- wide advertising and publicity which can be installed for sucking eggs.

The Bridge Construction Division of the Civil Engineering Department recently announced the results of two years' research in the field of dental bridges. The Pro- fessor in charge of this work wishes to express their deep appreciation for the work given by the Department of Metallurgy in the development of this new wire-neral plate. Of course, it is also a great credit to the Department of Metallurgy and unifying encouragement during the first nine years, the Bridge Department would have never discovered this great, scientific achievement.
