TIME ENOUGH FOR EVERYTHING

MANY men come to Tech without knowing very much how to study and how to conduct their college work. It is no good that they should try to guess what work they can get their work done and get enough sleep at the same time. There are a few who realize the value of budgeting their time, but a good majority that we hear the objections that "There are too many things to do, and there are not enough hours in the day to do assignments." The greatest tragedy is for this realization to strike home after the first term examinations. Then they have "disqualified themselves from their classes."

Examinations are over two months away. It is true, but it is also true that if one waits till they come, it will be too late to do anything about that. A few months ago, you can get through at the last minute with tutors and late nights, but consider now how much you are cheating yourself and your family if you rely on that. Tech students are already paying a small fortune for the privilege of attending school and it is not fair that they should waste their money and overtax their health cramming themselves with formulas they may remember through the night.

From time to time we hear that "the best preparation for examinations is faithful daily work through the term." Now is the time for that work. On the whole men at the Institute try to follow this rule, but they will control their time by cutting out their unnecessary wastes.

Almost everyone who says, "I'm too busy" can look back on his day and see hours of time he has wasted talking in the hall or discussing something which is of no real significance. Every one of us spends hours in a room that is too noisy, often rounding off the time in a barrack room, which should be cut out not only that spent in sports or in activities, or in movies or other recreation. It is the small things that pile up and here and there that cause the trouble. Assignments for many classes cannot be finished until the final fifteen minutes, and thus quite a few of them in half an hour, but they can easily be started in this time to great advantage. By reading the essentials necessary for the examinations one can have a much clearer understanding of the work he is to do, but without sitting down to do the job in black and white.

Tech is hard, no student will deny, but it is not only hard, they can and they must, because we have no moral right to support the United States government under the leadership of President Roosevelt is sincerely attempting to do.

When foreign policy dictates that United States merchants carry on trade with belligerents at their own risk, then we know that this is the elimination of the thriving international game, run its foreign trade involved is comparatively small. Perhaps this gentleman is afraid to sign his name (Editor's Note: While the letter from, "MA Graduate," was written, the person was momentarily shocked by the question. The person was_exposed as a U.S. Army Private."

What is your justification for using the square root of one equals plus or minus one. We'll do it now."
