ACTIVITIES ARE IMPORTANT

Many men who have graduated from Tech have become leaders in industry and have contributed to the progress of America. Some of these men are graduates this year, and in years to come these graduates will play an important role in society. They are the men who have been trained at Tech and are ready to go out into the world and make a difference.

Activities at Tech are not all for the benefit of students. They also serve as a way to help people who are in need. The students at Tech are encouraged to participate in these activities, and they do so willingly. The activities are a way to give back to the community and to help others.

Advice To Coeds

After reading your Dream Man Poll I find you're looking for the perfect man. Don't be silly—there's no such thing! Every man has his faults, but, then, don't you? So come down off your high horse and be satisfied with your little Tech love.

A Secretary

Grass Tracks

(Editor's note: In the recent several news, it has been reported that Tech is planning to build a new stadium. However, the students at Tech are concerned about the impact this will have on the surrounding community. They are asking for more information about the plans.

To The Editor of The Tech:

An illustration of the inherent selfishness of human nature is afforded by the recent appearance of "well-to-do" student behavior in the Great Court and between Walker Memorial and Building 8.

It is hard to decide whether Tech men who are in such a position are really acting in a dangerous and unsatisfactory way to prevent this. Joint action, economic in nature, as a response to a previous experience, is the only answer to the whole problem.

More On Religion And Science

(EDITOR'S NOTE: The editorial on religion, promised for this issue, will appear next week. The letters following have been received concurrently on Tuesday's editorials.)

We wish to bring your attention to our "proof" that Science Conflicts With Religion. Let us consider the steps of your argument.

You say that science is the unknown, in terms of which the known can be explained. This is the direct antithesis of the truth. In the laws of nature to explain observed phenomena, it is the phenomena which are known; the laws of nature which are stated in terms of the phenomena. Newton, in explaining the observed events of the universe, invented the concept of universal gravitation.

We entirely agree with the definition that religion explains phenomena in terms of the unknown. On the other hand we disagree with the statement that the two methods of explanation are incompatible when applied to the same phenomenon. To follow the above abstract methodology, science having observed the planets to follow certain laws, can explain this fact by inventing the forces of gravity and the will of God. Science has the right to explain its phenomena by reference to phenomena, religion, the forces of gravity and the will of God, the two are not incompatible.

Robert V. Coburn

Religion Anad Science

It is quite true that religion and science are often applied to the same phenomenon, but we cannot assume a single explanation is exclusively religious or exclusively scientific. An explanation of a phenomenon may take the form of stating what it is like, or what it is for, but these are complimentary rather than opposed. Biology may explain the mechanism of emotions, but not their reason for being, even as God may work out his purposes in a manner explainable by scientific method, though the purport of the work of God is also religious. The work of science is to place facts in "frames of reference" to explain in terms of the known, therefore science is no longer a science and religion is no longer a religion.
