Sikorsky Speaks On Flying Boats For The Future
Noted Designer Predicts Europe To Be Reached In Trip Of 16 Hours

Sikorsky showed that it would take eight years to travel to Europe from New York by flying boat, or approximately 16 hours.

Sikorsky's prediction was based on the fact that the plane would have to travel at a speed of 150 miles per hour, which is the speed of a typical flying boat.

The designer also predicted that the flying boat would be able to carry 100 passengers comfortably, and that it would be able to fly over the North Pole without refueling.

Sikorsky's flying boat would be equipped with a powerful engine that would be able to propel the plane at a high speed for long distances.

In conclusion, Sikorsky's prediction of reaching Europe in 16 hours by flying boat was a revolutionary concept at the time and paved the way for future advancements in aviation technology.

The T.C.A. to Sponsor Annual Embassies
Several Large Dinners Planned: Dr. Kinnsel and Lovett Speak

With twenty-four formalities, the tour of the United States will be attended by a total of 2,000 people. This year, the T.C.A. has decided to sponsor a series of dinners and events to promote cultural exchange and diplomatic relations.

The first dinner was held in Washington, D.C., and featured a prominent political figure as the guest speaker. The event was well-received, with attendees praising the opportunity to interact with influential leaders and expand their understanding of American culture.

The next dinner will be held in New York City, where the guest speaker will be a renowned author and scholar. The event promises to be a highlight of the tour and is expected to attract a large audience.

These dinners and events are part of the T.C.A.'s efforts to promote international understanding and foster positive relationships between nations.

Faculty Count For Voluntary M. S. Is 104-68
Also Favored By Large Student Majority In Survey

Technology opinion, as shown in The Technology, is that the faculty student count, though low, is reasonable. The students are, in the majority, in favor of the reduction of the 30% R. O. T. C. component of the student body.

The students believe that the presence of a large R. O. T. C. component is detrimental to the academic atmosphere and should be reduced. The students are also in favor of the reduction of the 30% R. O. T. C. component of the student body.

The students believe that the presence of a large R. O. T. C. component is detrimental to the academic atmosphere and should be reduced. The students are also in favor of the reduction of the 30% R. O. T. C. component of the student body.
