THE TECH

Sixty Candidates Out For Baseball

Hecker, Peskoe, Arch, Sunbury
Are Interclass Managers (Continued from page 1)

Attended by over sixty, the annual meeting of baseball candidates held Tuesday evening opened the baseball season for Tech with a bang. The meeting was held year after year by the twenty or so fellows who came forward throwing the ball around for the most part. It was a warm-up season for 1938 and it carried out the boys.

At the annual meetings managers of the class teams were elected. They are: Arch for the Sophomores; Sunbury, for the Juniors; Hecker, for the Seniors; and Peskoe, for the Freshmen.

A. B. Booth Victor In P. T. Track With 5200

Wallace, Summer Places In Annual Competition

Alfred B. Booth was announced today as the winner of the annual P. T. Track Competition. His topside score was 5200 points. Following him the next nine in order of their scores are: John F. Wallace, 4811; Edwin V. Summer, 4071; John F. Lyons, 4691; Jack D. Gershowitz, 4391; Walter T. Guary, 411; Lewis T. Jester, 4051; William L. King, 3831; Robert C. Kurtz, 388; David B. McNally, 3791.

The high points of the competition were the two records broken during the course. Napier broke Jim Thoman’s record of 210 in the one-mile run and recorded that the first candidate to run a mile in less time than Napier’s is entitled to a cinch for champ in N. E. Intercollegiate League, seems a pretty good bet.

The rise team has certainly been going great guns this year. It is now almost unbeatable by collegiate opponents, but they can certainly face each other.

A. M. T. Fencing Team To Meet B. Y. M. C. U.

Having lost four of their six last meets this season, the varsity fencers have decided to extend their win to four this week-end when they engage Boston College Friday at 2:30 and Boston Young Men’s Christian Union Saturday at 2:30. Both titles will place in the Walker gym. Though the invaders have good means and should provide stiff competition, the Tech aggregation is expected to come out on top.

Representing the Institute will be: W. M. Kipn (20), H. Johnson (20), Ray Krueger (20) and John Barth, ’46.

Sikorsky

(Continued from page 1)

The flying boat is, and will continue to be the largest vehicle of air travel, the speaker said. This type of plane presents five problems to the engineer according to Mr. Sikorsky. It must be capable of balanced floating while standing still in the water; it must be able to move at a steady speed in the water; it must fly and finally, its hull must give the plane the ability to land on water.

The Sikorsky hulls are built by moving models with a motor boat and later making more accurate tests with the real hull. It started as the four-sailed aeroplane called the flying boat and from the pioneer of the flying boat the multi-engined air craft.

R.O.T.C. Polls

All second ballots were not put forward for the student body. The faculty first choices were taken. There was not much difference in the first and final polls. The only exception was a small number of votes indicating the possibility of a revised committee on the question of attendance and compulsory service, 16 wanted no E. O. T. C.
