other than physical excitation, goldfish races
and swim lithographically toward his era-
work is caused by the collision of helium atoms
in their "super excited" state, scientists believe. In such col-
face certain healthy persons can carry typhus fever, these birds can transmit typhus fever to other
means to humans while being subclinical them-
selves."
Parrot Fever
"A particularly photogenic may not be as dangerous as a Typhoid Mary in the kitchen," federal
health officials are warning. This is because the returning importation of parrots and love birds are now being
considered as a potential threat to human health. As a result, the interest in such birds has shown a
increase in recent years. However, the health department has urged caution. It is important to keep in
mind that birds can carry diseases that can be transmitted to humans, even if they appear healthy.

Sophomores Stalling
Sufficient objection to the recent Institute Committee action in ruling that the cost of
the flag flying incident be divided equally between the classes involved has brought forth a
petition from the Sophomores to have the matter referred to the student body. From all
appearances, it is mainly intended just to "see what will happen." As everything about
the petition seems to be in good order, the Institute Committee will probably have
to see that a poll is held. This means a lot

Cutting Down on Wet Feet
It is with considerable satisfaction that we notice recent work towards making the parking
space behind building ten accessible during
wet weather. This was a project we proposed almost a year ago, and are glad of
the satisfaction that our idea has finally brought constructive action.

Our Heavenly Enemy
Helium, the gas which has played such an
important role in the development of aircraft
craze, is continually being lost from and added to the earth's atmosphere. Due to the high density of helium in
the air it is caused by the collision of helium atoms with oxygen atoms which is
called the earth's "super excited" state, scientists believe. In such col-
aborations, the surplus energy is transferred to the helium atoms in the form of kinetic energy which is sufficient
to escape our atmosphere in the same manner. But reser-

Semiaulcine
Semiaulcine is a new compound isolated from the aerial parts of Semiaulic
caryophyllaceae, a tropical plant. It has been shown to have antitumor
properties and is being investigated for its potential use in cancer treatment.
