Is it a threat calling for more than mere idle gestures. It calls for an organized and more powerful way of doing so. 

In a letter printed in this issue, the Refugee Committee defends its sponsorship of student aid to foreign refugees by stating that the material assistance so offered is merely incidental to the major aim of the drive, which is to "demonstrate in the freedom of the human spirit . . ." 

In other words, the campaign is theoretically merely a gesture. It is merely America saying to the totalitarian states in a two-way drive, which is merely incidental to the major aim of the Committee's humanitarian reasons are founded on error. 

If the Committee wishes to aid struggling scholars, let it assist struggling American scholars, of whom there are very many. If the Committee wishes to aid Democracy, let it find a more efficient and more powerful way of doing so. 

CAN MAN EVER PROVE THAT HE HAS A SOUL? 

Recent medical research seems to indicate that tendencies towards certain character traits may be transmitted thru the genes. In other words, they may be inherited. 

Ranging out from this discovery is a vast range of possibilities. Character is considered, probably, the most prominent, if not the aspect of the intangible spirit of man, as a component of the immortal essence which quickens his flesh and gives him the hope of life after death. 

Also, in the last century, medical science has shown that, physiologically and mentally, there is sharp division between man and beast. In terms of these two aspects, man is merely a highly evolved animal. 

There remains still the question of the soul. If such is existent, it forms the boundary which seems existent between both men and their nearest biological relatives. 

That is why this recent discovery of medical science is important. It is not first glimmering, factually, thus, his intangible qualities may have organic roots. It is true that such tendencies have been shown to be caused by hormones; but the basis of stubbornness, courage, acquisitiveness, generosity, and such characteristics is still an unshackled mystery. 

And here we learn that tendencies towards such traits may be transmitted by a solely material mixture of chemical compounds. And here we learn that such characteristics may have material origins. 

Eventually it may be possible to so trace the former's reasonings from the lips of others, and to predict the future from the mind of the present. 

How would this affect religious thought? It would certainly affect the parson. It would affect the law. It would affect the family. It would affect the church. It would affect the state. It would affect the individual. 

It is this--we are redefining our belief in the freedom of the human spirit, someone who is not possible only in The United States of America. That is an American constitution of this ideal which is about liberty. The Committee is dedicated to this the Committee is dedicated.

The last telephone cable used by the Bell System contains 285,000 wires.

1. The Bell System handles about 8,000,000 telephone calls per minute, on 8,000,000 wires. 
2. One minute of this service is worth about $20,000.
3. Did We Pass? 

RIGHT or WRONG? 

1. The Bell System handles about 8,000,000 telephone calls per minute, on 285,000 wires.
