Dear Editor—

The "Tech" is for May 9, and I wish you permission to announce the crew situation at M.I.T.

As in a graduate institution, it is the custom of every year's crew to elect a captain, who is also kind enough to mention that the student is able to provide for them properly. A moratorium on classes for a week, or at least on Monday, before final examinations, would give each man a chance to get set for his finals. He has very little chance now.

PITY THE BROWNBAGGER

"Tech is a place for men to work, not boys to play." How often have we all heard those words, and felt they were intended as a delight?

The position of having a large number of exams in the three days preceding the start of the longer finals. A few of these students are further overburdened by having one or more hour ordnance on Thursday of that week.

That is an unfortunate situation, to put it mildly. A man who has, say, seven exams in seven days, or eight exams in eight days, cannot, unless he is particularly brilliant or justifiable in his opinion, to do his best. If he is forced to do his preparations for examination on the vast amount of material he has been taught, he also has classes—say, in some course he is getting fresh material up to Wednesday of exam week. That is placing an unfair burden on the student, particularly on the upperclassmen.

If the Institute, as it must, is going to grade on the basis of examinations, it should arrange somehow so that the student is able to prepare for them properly. A moratorium on classes for a week, or at least on Monday, before final examinations, would give each man a chance to get set for his finals. He has very little chance now.
