of the dormitory, which will be completely leveled as of next Monday. All students who have not yet left their rooms for the summer will be asked to remove rooms in the next few days. The porters will move the students' property sometime before noon June 1. Although evacuation of students' property is not the plan, last year's trial was so successful that the plan is expected to give the seniors an opportunity to avoid heavy hauling for the last time at reasonable rates. The charge for the rooms will be one dollar per occupant per day.

Franklin Trumbauer Plays

Four girls have been chosen to play for the annual Senior Ball at the Copley Plaza Hotel on Tuesday. Price E from 5 P.M. to 9 P.M. Trumbauer who was a member of Paul Whiteman's band for six years, is coming to Tech as a part of a tour of college prints and dances in eastern United States.

A novel chart has been selected by the Ball Committee headed by Harold R. Seykota '39, to be presented as a souvenir of the dance. Each attending the ball will receive a golden locket containing a picture of her escort. The Institute seal and the numerals of the Class of 1939 have been appointed by Permanente Tech of Tech. They dipped their fingers in it . . . then paint a rainbow on the river. How the wind blows. That's how the stream flows. Reclaimed, it is used as fuel in the waters of the Rouge.

There's a rainbow on the River Rouge by the Ford plant—all in color. It is washed from metals and parts by the water used to cool or clean them.

To most folks that colorful coating spelled just oil; no more. To Ford men it spelled "waste." They dipped their fingers in it . . . rubbed them together . . . reflected. A few days later a strange device was installed where the stream flows through a narrow channel into the mooring slip. It was an oil skimmer.

Poor Richard said straws show poor work. Better take note, there's a wind in the water. This is no ordinary wind; it is a wind that is being generated by the Detroit Edison Company. The company is planning to build a plant on the Rouge, just below the Ford plant, to generate power from the water. The plant will be located near the Ford plant and will be able to supply power to the Ford plant and other nearby industries.

THE TECH

Debate

(Continued from Page 1)

an extracurricular debate on the topic: "Resolved: that the dignitary tone of formality should replace the casual game of polo as the national collegiate sport." The affirmative side, which was without vote before the argument began, was upheld by Professor Theodore Smith (of the English Department). Mr. Arthur A. Omental (chairman of a motion in sectary. Peter M. Brezina, 39, opposed the affirmative side.
