To the freshman leaving for camp today, we have a few words of advice that might enable him to get more out of his stay. Remember always that the purpose of the camp is to help orient men who have never been here before. There are some straightforward ways of making friends, but if your surroundings make you feel reticent, remember that the other fellow probably feels the same way. So put on a bold front yourself—soon you will feel at home.

Remember also that you are not now the same as you were when you arrived here. You have met them in class and if you don't meet them now you won't meet them.

You will hear a great deal about activities at camp. The outstanding activity men of the Institute will tell you about the opportunities for extra-curricular work. Listen to them carefully, for a responsible number of outside activities is necessary to round out a complete program. If there are any activities you are particularly interested in ask the upperclassmen about them. Don’t be bashful, they are only too glad to oblige.

Also the professors will give you some of the background of Technology—a little of its history and its traditions. Listen carefully to what they have to say. The knowledge you pick up will be pretty good eggs.
