THE TOOL OF SCIENCE

Science has not supplanted and cannot supplant or destroy religion in its proper sense. It can, however, give a setting to both science and religion.

The whole tendency has been to emphasize the science has continually forced a sense. It can, however, give a setting to both science and religion.

The above quotation is from an address which our thoughts on religious matters must revised our concepts of the physical world, which was given to the Air Corps. Four Captain Charles H. Moorehead of the members must have been occurring before schools for the purpose of obtaining grantees from the appliants, and they will take applications from any of those interested in the flight schools located throughout the United States. The most outstanding work in the preliminary school will be transferred to the Field Base at Field Base, Texas, for a more extensive training.

CONGRATS AND NEW CARS

Sporiting a very good-looking cover, the new T.E.N. is now on the market. The tone of the whole issue is keyed on that cover, which is one of the most interesting and com- piling we have yet seen.

Congratulations are also due for the number of authoritative writers who were able to secure the names of Edel Ford, Litchfield, McSweeney and Henry But the new automobiles must be applied to the physical world.

The capabilities of the automobiles now on the market almost surpass the power of human adaptability to them, which will enable us to pass on results and anecdotes in science.

People must not only be aware of the dangers that power and they must learn how to handle it.

VOODOO'S HOODOO

Despite a flood of ringers (some of whom have been identified as members of the Washington Redskins) Voo Doo, last Sunday, went down to a crushing defeat in the right, which in this case were represented by the stalwart men of The Tech.

As gentlemen, we suppose we should not rub in our easy won victory. Of course, we should make no mention of the waning enthusiasm of those unspirited souls shown upstairs in VooDoo by the above mentioned route.

And, of course, we certainly will not point out the differences between the definition of hoodoo and ideals which are the proper function of religion.

While not supplanting the faiths which are regarded as representing the highest ideals and aspirations of mankind as opposed to theological rules, doctrines, theories, etc. Science has therefore had tremendous influence in shifting the emphasis of religion from the physical to the spiritual world.

The two quotations from an address given recently by Dr. Compton. It is a summary of an unusually clear, thoughtful, and well executed address. The most discussed concern: science versus religion.

The problem is today one of renewed per- missions, because of which the chronicles of religious or as representing the highest ideals and aspirations of mankind as opposed to theological rules, doctrines, theories, etc. Science has therefore had tremendous influence in shifting the emphasis of religion from the physical to the spiritual world.
