parties using the Tech Cabin, the cabin might begin to render a small amount on its cost and upkeep. Consider, however, how the average party using the cabin, it would take only an unnoticeable fee to put an appreciable dent into the T.C.A. balance.

If these proposals were to be put into effect, the T.C.A. would not be compelled to continue such a large and expensive monthly food budget, and thus would have a far better chance of obtaining its quota. Probably, also, more students would contribute on a regular basis, under the impression that they are helping a charitable organization.

With the closing of non-charitable departments from its drive budget, the T.C.A. would largely revert to the aims implied by its name—The Technology Christian Association. The money which it received from the students would go to charity alone, as is the intention of the donors.

DOCTOR KNOWS BEST

Institute students are growing taller and bigger, according to statistics released by the Medical Research Department. However, the strain of science and engineering is also becoming more evident for the homburg. Medical Memorial Hospital has been but 21.5% more bed patients during the past four month period which ended on October 31st than in the corresponding period in 1939. Anthropologists have been telling us for many years that the human body, together with its civilization which follows from it, is expanding. Analysis of measurements made on college students in recent years shows that little, by centimeter by centimeter, they are beginning to tower over toy and granddad.

Here at Tech, it is not necessary to wait a generation to observe these effects. For statistics show that the Freshman Class is five feet, ten inches tall, and gains at Tech—Wolfe's wonders from an average of two inches taller than his Sophomore rival. In the Field Day golf fight, the younger men show an advantage of good, substantial beef on their side, for one at hundred and forty-six pounds they outweigh the second year's weight by exactly 13.5%. One conclusion that happy-go-lucky students should draw from these statistics is that reliance on an ideology which follows from it is ultimately 13.5. If It's Cameras or Supplies

You will find All Tech at the camera shops in all cities and principal towns. You can phone the Railway Express agent or just phone the Railway Express agent and your name and address and we will make every effort to supply you with what you want. We will also explain the techniques of waxing, January 7, 1940. In the meantime, the T.C.A. has erased its eighth year that this service has been in operation. Reservations and tickets may be obtained from the Service Department, in addition to those who wish to obtain a ride. Reservations and tickets may be obtained from the Service Department, in addition to those who wish to obtain a ride. It is to be hoped that the hundreds who will file into 10-213 this Thursday afternoon will auhenticate their studenthood by the spectacles with which a small boy opens a box of firecrackers. Tech men are prone to blow-}

TALK TO BE GIVEN

By Famed Skier

Member '36 Olympic Team

Will Also Show Movies

In Room 1-390

Ted Slusser, member of the 1936 Olympic team, will talk on "Ski Waxes," and will present movies on skiing at an open meeting of the Ski Club to be held in Room 1-390, Tuesday, December 12, 1939. Mr. Slusser is a member of the Dartmouth ski team, and is President of the Harvard Ski Association. The motion pictures which he will show are three tales of skiing in China and the Far East.

Importance of Waxing

According to Frank A. McIlhott, '41, secretary of the Pacific Coast Ski Association, Mr. Slusser was asked to speak on waxing as it is one of the most important practical knowledges one needs to understand skiing. The type of wax used determines the speed at which the skier will slide, but besides lasting the quality of wax, mass will also be to allow one to go uphill without slipping and then be able to slide down.

Mr. Slusser will explain the correct type of wax to be used for different situations of snow and how they work, and will also explain the techniques of correctly applying waxing skills. Non-members are also invited to attend this lecture.

T.C.A. Reopens

T.C.A. Drive Home Service

An All-Participation Drive which is scheduled between The Tech and the T.C.A. on Sunday morning, January 7, 1940. In the meantime, it is to be hoped that the hundreds who will file into 10-213 this Thursday afternoon will auhenticate their studenthood by the spectacles with which a small boy opens a box of firecrackers. Tech men are prone to blow-through on little provocation. Mr. Slusser will explain the correct type of wax to be used for different situations of snow and how they work, and will also explain the techniques of correctly applying waxing skills. Non-members are also invited to attend this lecture.
