What is important about this inherent conservation is that it can lead to stagnation. If a system has no longer any avowed function, mere custom should not command it further life. The Combined Professional Societies, no longer useful to the Institute, uninfected in executive duties which some other, differently constructed organization might do, deserved to die.

The Combined Professional Societies, no longer useful to the Institute, uninfected in executive duties which some other, differently constructed organization might do, deserved to die.

The Reader Speaks

To the Editor at "The Tech":—

As the one who brings more vibro to the Walker Service than any other, I, with due deference, submit the following:

The Tech (vol. 21, p. 277) reporting the expansion of most of its offices in the words of "... we don't know how to control it because we can't control it," is far from a help to the student body.

Cordially,

William Jackson

Dear Editor:

Part of the world of Tech man has been like open soup bubble.

Two weeks ago, Bill Susman and John Burr egg glanced thru the Tech a battle of written words in the problem of governmental activity in the life and the effect on and not you and me. Then, The Tech comes in front with a position of Supervisor and its effect on us and you. Which, in the long run is more important, Walker or the Federal Reserve government?

From the flood of such and the cry of the concerned, Walker leads hands down.

Are we due to such problems as war, peace, capitalism, religion, government, labor, and Russell? Have we, as M.I.T. should provide a restaurant comparable with the quality of the food served at the Walker Dining Hall, forced to withdraw?

Are we deaf to such problems as war, peace, capitalism, religion, government, labor, and Russell? Have we, as M.I.T. should provide a restaurant comparable with the quality of the food served at the Walker Dining Hall, forced to withdraw.

Kneeling down and when to apply engineering in such a problem of a person, the simple application.

TheStyleSheet is a simple matter which he is to explain the question of current and, we're going to make a tricky poor state of current and, we're going to make a tricky poor state of current.

We all have or should have a contribution to make to society. How are we going to make it, if we don't see why?

New issues on a continental nature; less complex of engineering at the expense of a background, more opportunity to a discipline problems in the class room, more time to study and really learn; that is what we need. A degree in five years? Why not! A degree in four years so many of these disciplined students of Ted's interest in what we don't see why.

Dear Editor:

In recent letter to you a number of well informed points were brought out in your editorial which we see the need of the quality of the food served at the Walker Dining Hall. To keep us informing you is very proper that we hear students with a high standing, in M.I.T. should provide a restaurant comparable with the other standards.

Arguments defending the Walker Service, all of which were incidentally good by student employees, were based mainly upon the fact that the present service has not dropped. This point is of considerable importance as such a continuation is largely dependent on the demand. These men at Walker in preference to the restaul ants in the neighborhood, which it is no comparison.
