Swimming Pool Spiked in Desperate Effort to Heighten Spirits

and Following Story

For Further Details About This Startling Concession To Bacchus

The proposed use of what is commonly called "grain spirits" instead of the new swimming pool water by a group of students on the campus of the University of California, was announced in a 5.141 class recently.

Professor Diana, who has been a leading member of the American Society of Chemical Engineers for many years, has been studying the use of "grain spirits" in the swimming pool for some time. He has concluded that the use of this material will greatly improve the swimming experience.

"We have been experimenting with different substances for the past few years," he said, "and we believe that "grain spirits" will be a great improvement."

The committee has been considering the matter for some time and has decided to proceed with the use of "grain spirits". The first pool will be opened to the students on October 15th and will be available for use until November 30th.

Adequate protection will be provided against the use of "grain spirits" by the use of a special mix of chemicals that will prevent any harmful effects.

The committee has also decided to offer a prize of $100 to any student who can prove that "grain spirits" are dangerous.

A dance will be held on October 16th to celebrate the opening of the pool and to introduce the new material. Tickets will be sold at $0.25 each.
