THE LIGHTS THAT FAIL

Modern fluorescent lighting is now in the process of being installed in the historic reading room of the Walker Memorial Library, but nothing is being done toward alleviating the overcrowded condition as reflected in the reading tables along the two balconies.

At present most of the tables have, dark shaded lamps which give only a semi

light, while on the other hand, the lamps at all others are minus balls. All in

the system is very make-shift, justifiably so in the temporary arrangement.

Since the Walker Library has been moved, the effectiveness of the facilities has been increased and the lighting being the only major deficiency. We feel that adequate lighting is one of the most

important requirements of a good plan and that every effort should be made toward protecting our eyesight by improving this aspect of the Walker Memorial Library.

UP AND AT 'EM, BOYS

In the last two years, the Technology crew has come into its own in collegiate circles. Where we were formerly an also ran, we are now in the top circles. The New York Times review of the sporting year gave the M.I.T. crew the distinction of having made the biggest improvement of the year.

Tomorrow we enter our second race against Harvard this term. Princeton is also entered, but it is primarily a Harvard race and we are out to best, to average the defeat last week. Whatever the outcome, we have the distinct advantage of being the first team in four years against which Harvard entered as the underdog.

At the races last week, one of the largest crowds (over 12,000) ever to witness the event and cheer for the crews. Tomorrow we should turn out in even greater force to lend us a support. Any crew on that little increment which is needed for them to come out on top. Win or lose, we're behind our crew one hundred percent.

Clippings

This is the first edition of the "Clippings" column which will appear temporarily in the future, if it deserves the space. Its prime purpose will be to bring the reader up to date on the headlines of interest, as gleaned from our exchange files. Any contributions or suggestions addressed to the "Clippings" Editor will be greatly appreciated.

In reviewing the ill-fated crew races last Monday, the "Tribune" of N. Y. Times tries to tell us in its edition of Tuesday, April 23rd, that M.I.T.'s 100-pounder jars by over 100 seconds. "The crew has thought a lot of Harvard," says the "Tribune," but then you know how some people go in for that phonetic spelling.

Paul Allen opens a new one on us in his column "The Nation's Politics" in Tuesday's Herald. In the course of discussing seapower he says, "Japan has a fleet far outdistancing its national requirements. It is not a traditionally school-spirited institution like

FOR TOMORROW...

So much that's important is happening today—in America, in Europe, Africa, Asia. And you know about it almost as soon as it happens!

Trace most any piece of news to its source and somewhere you'll find the telephone or one of its relatives—radio telephone or telegraph in the picture. These spindly instruments have been developed from telephone research or utilize telephone equipment, both.

In these days, the Bell System is proved that its facilities are helping in the fast and widespread dissemination of news—so essential to enlightened public opinion.

How you get late news... so early
