A HEARTY WELCOME

Officially The Tech extends a hearty welcome to the new students and their behalf of the entire Institute student body. Particularly to the Class of '45, we wish to express the best of luck for their four-year stay at Technology.

In almost every case, the new student will be facing an entirely new scene here at the Institute. New friendships will be formed and the routine of everyday life will be materially altered by the need for rather intensive study.

At this moment each entering student has a name which he uses to sign registration materials and the like. However under any analysis, it is only a name. By means of that name alone it is not possible to determine what learning has been done and what his scholastic history may be, or what part he plays in the great drama called Life. John Smith may just as easily be a city slicker as a country buck.

However, by this time next year considerable progress will have been made toward making John Smith more than just a name. He may be a scholastic genius, a well-rounded intelligent student, a grind, a patriotic lazy bones, or a continued slacker, but by his deeds to shall he be known.

Every student will leave a mark in the annals of undergraduate life at the Institute. Some of these marks may indeed be infinitesimal defying most careful scrutiny, but others will be records which all can see. Some may prove outstanding in the class, some in activity leadership, and others on the field of sport. Success in a college career, as in any other, is actually measured by the degree to which a student develops the talents with which he was endowed.

The mediocre student who has utilized his ability to the utmost is certainly more successful than the student who has allowed his talent to go untapped. The mediocre student who has utilized his ability to the utmost is certainly more successful than the student who has allowed his talent to go untapped.

AN ACTIVITY FOR YOU

During this week-end at Freshman Camp, all of the undergraduate extracurricular activity representatives will explain to the new men the function of their work and the advantages to be derived from participation in their activities. This is the first opportunity that the new men will have to learn of the activities that Technology has to offer. They should try to decide which activity appeals to them and then participate in some fashion. Many of these activities will be equipped for their own team, a straightforward picture is usually presented.

It is generally recognized that participation in an extracurricular activity of some nature is vital to the development of a well-rounded college life and is often as valuable as the academic studies. While the common complaint against a technical education is the fact that it is so often results in a man who does not know how to get along with people, many students receiving in taking part in an activity is invaluable in combating this tendency.

Since most of the managements of an activity at Technology change at mid-term, the freshmen assume positions of responsibility at the middle of their freshmen year. For the freshman it is extremely desirable that men interested in activities should go out at the beginning of their freshmen year rather than waiting to the midpoint of their freshman year for the coming of a new organization. In any event, after a year, a student’s habits pattern becomes so fixed that it is difficult to get out for a new activity represents a difficult change.

It is also considered wise for a student to select a few good activities rather than a large number. In this way he can accomplish a lot more in actual achievement. Members of the Class of ’45, these are your activities; you should do your part to support them.

FACULTY MEMBERS AT MASSAPOAG

ADMINISTRATION

Dr. Karl T. Crump
Dean Edward L. Morrell
Dean Thomas H. Cowdrey
Burlond A. Thorson
B. B. Stilwell
John J. Shawlade
Nelson L. Stroh
Frederick Bartlett
William Carlisle
Nathan B. Dalles
Dean C. P. Brinton
Dean W. R. McMurroth
Newell N. Aches
Herbert C. Ford
Robert E. Lobell
Robert M. Kimball
Albert W. Bridges
Phil. W. Street
Oscar Hedlund
Nathan Sage
Thomas F. Crocker

INSTRUCTING STAFF

Architecture
Prof. L. H. Anderson
Prof. H. L. Berthoud
Prof. E. L. Gamble
Nathaniel Sage
Alfred Stoeckle

Chemistry
Prof. L. F. Hamilton
Prof. L. J. Ogilvie
Charles C. Wrinna

Physics
Prof. W. E. Warren
Prof. W. F. Bear
Prof. W. E. Altemann

Hygiene
H. H. L. Harker

Military Science
L. T. Huyang

General Studies
Prof. G. W. Whittington
Naval Architecture and Marine Eng.
Prof. George Owen

Drawing
Prof. J. D. B. Moore
