IN THE MAKING

A new life is now in the process of being born. Although still in the development stage, this new organism gives evidence of life and activity as it unfolds from day to day.

Such publications have met with considerable favor on other college campuses and seem to fit in rather than compete with existing publications. A publication of this sort can cover pictorially much more adequately than the newspaper many phases of school life.

Wednesday night a meeting will be held in the news rooms of The Tech at 8:00 P.M. to discuss the first issue, which is scheduled to appear some time after Field Day. Present plans call for four issues during the school year. At this meeting all students who have had experience in literary, business, photography work and might be interested in working on a pictorial publication are invited to attend. T.E.N., The Tech's first born, is soon destined to have a little brother.

The Reader Speaks

Editor, The Tech.

Dear Sir:

We have observed the birth of a new tradition that, in cooperation with the Freshman Camp program by the Sophomore Class—thus allowing the unorganized freshmen to be in the company of their seniors—and with a preview of The Tech. Class of '44 should be proud to be the first class in many years to have the native perspective and first-hand sense of values to take this stride.

With the above in mind, I should like to take this opportunity in behalf of the Institute, the TCA, the Agora Badly and the Quadrangle Club for their free cooperation. For without their aid, as the editorial restrictions of their Artistic Freedom Club could not have been as successful as it proved to be.

In the past, it has been a part of the regular yearly programs of the above clubs to lead rival parties to Lake Massapoag and we all should like to offer our congratulations to the above organizations for placing a stop to a stupid and dangerous practice with the cooperation of the Freshman Camp. So far as these roads are for the freshmen, but the disadvantages far outweigh the benefits.

At any rate the speakers as a discipline in trying to present their material to freshmen dined by the wide world, but there is also the problem of visual and physical injury involved. Although most followers are willing to take their chances of being hurt, there are a group of these individuals who would take delight in being struck in the situation of a serious accident as an added thrill to prove themselves the best in the world.

We hope you will find this a worthy subject in the coming Field Day.

HUSBAND, Shaw, President, T.C.A.
