CONSTRUCTION TO THE FORE

Although the construction program of the incoming class is present at a point in the new chemistry building and defense works, we feel that there are a few minor projects which our own maintenance crews could carry out to improve the appearance of the campus grounds considerably.

The campus is or is in the process of being too good a shape. However, we are badly in need of a cement sidewalk running parallel to the roadway beside the Eastman Building. Under prevailing conditions pedestrians in this area are forced to walk either in the road or proceed single file over the grass along the curbing. This practice not only endangers the lives of people on foot, but has resulted in a very unattractive pathway running the length of the sidewalk beside the Eastman Building. At present this is one of Technology's greatest eyesores.

A similar condition exists in the form of a well-trodden path from the rear of Walker Memorial beside the tennis courts to Ames Street, breaking through two lodges on the way. In this instance, too, the solution could be remedied by the construction of a cement sidewalk to take the place of the path.

The Class of '45 is more than two years ago, and during this period of unceasing pursuits this was "gracing" the grounds between the dormitories and the Eastman Building, just such an action taken by the maintenance crews. A cement walk replaced the old path thereby adding a small but decided improvement to our campus lawns.

If the two suggestions made in the preceding paragraphs are to be followed up seriously this fall, action must be started at once. Otherwise, frost will be in the ground before the cement will have had time to set.

We are on the subject of grounds improvements, we would also suggest that something more pleasing to the eye be eventually substituted for the stake and rope after now being used as barriers on lawn corners in the Great Court. It should prove satisfactory to plan a hedge arrangement in many of the spots that tempest students to take short cuts. In others a low wire fence should serve to guide their way of a collegiate campus that we should improve the appearance until the committee has noticed it.
